Our Services

Bitrix CRM

Bitrix24 is a web-based solution that offers mobile apps and all facilities for your sales team to update their activities and opportunities from where ever they are. Same way it will provide online and up to date sales funnel to the sales managers.

Bitrix24 is a software service developed by Bitrix, Inc. providing a company with a full range of teamworking and social networking means. The service is primarily intended for small and mid-scale businesses.

Cloud Solutions

Businesses can no longer afford to miss out on the huge opportunities being presented by cloud-based services, which are transforming IT strategies and business models worldwide.

Boss Cloud Solutions provides your business with:

Flexibility: Boss Telecom offers an elastic cloud model that enables our customers to scale quickly and on-demand.

Reliability: Boss Telecom provides direct connectivity to the cloud on our highly resilient, meshed network.

Security: Boss Telecom's secure network and dedicated connections to the cloud ensure your data is always protected.

ICT Support Services

Every business has a goal to turn a strategy into a result, and information technology solutions make this happen. All you need is to choose an experienced ICT Support provider who will deliver the right solutions for your organization.

It would be difficult to imagine a modern business not using any kind of IT support in its operation. Time spent troubleshooting IT Systems is time away from things that really matter. That's why businesses trust Boss Telecom team for comprehensive IT services.

Our Fully Managed IT Support (Business Support) is designed to provide professional IT support for end-users as they need it. A comprehensive alternative to having your own IT department.

Managed IT Services & Support

Gain Access To Top IT Expertise, Reduce IT Costs & Increase Operational Efficiency!

With the goal of simplifying IT operations and reducing costs, managed services enable businesses to outsource part or all of their technology management.

A Managed Services Provider (MSP) can take the burden of managing your business technology services off your shoulders. This can range from completely outsourcing your IT needs, to arranging for co-managed services with your existing in-house team.

Boss Telecom is one of the top IT companies who are ready to serve you around the clock. We offer competitive pricing.

Our team of world-class talent genuinely cares about our relationships and providing solutions to your business needs. We understand that response, accuracy and care are the fundamental keys to a successful, long-term partnership.

Reach out to us and set up an exploratory call to see how IT support and managed services from Boss Telecom can help YOUR business grow!

Network Infrastructure

In order for your employees to work productively, you need to have a high-performing core network infrastructure. What good are your business systems and applications if your server experiences downtime due to storage issues or your data isn't safe from outside threats and viruses?

As a business leader, understanding the importance of a web infrastructure design and developing an implementation plan based on the needs and priorities of your company is essential to long-term success.

Partnering with Boss Telecom provides a reliable network infrastructure plan while giving you the flexibility to augment your existing staff or to completely outsource all services.

Our team can manage your network infrastructure design and implementation from the ground up, connecting multiple sites, bringing up new locations and powering the business systems your company needs to thrive. Our senior network infrastructure consultants and engineers have years of experience in architecting and designing cloud, on-premises, and hybrid cloud infrastructures that are aligned to specific business goals and models. Every infrastructure is unique to each client but aims for the same goal: optimized operations.

Access Control and Time Attendant

(a) Access Control

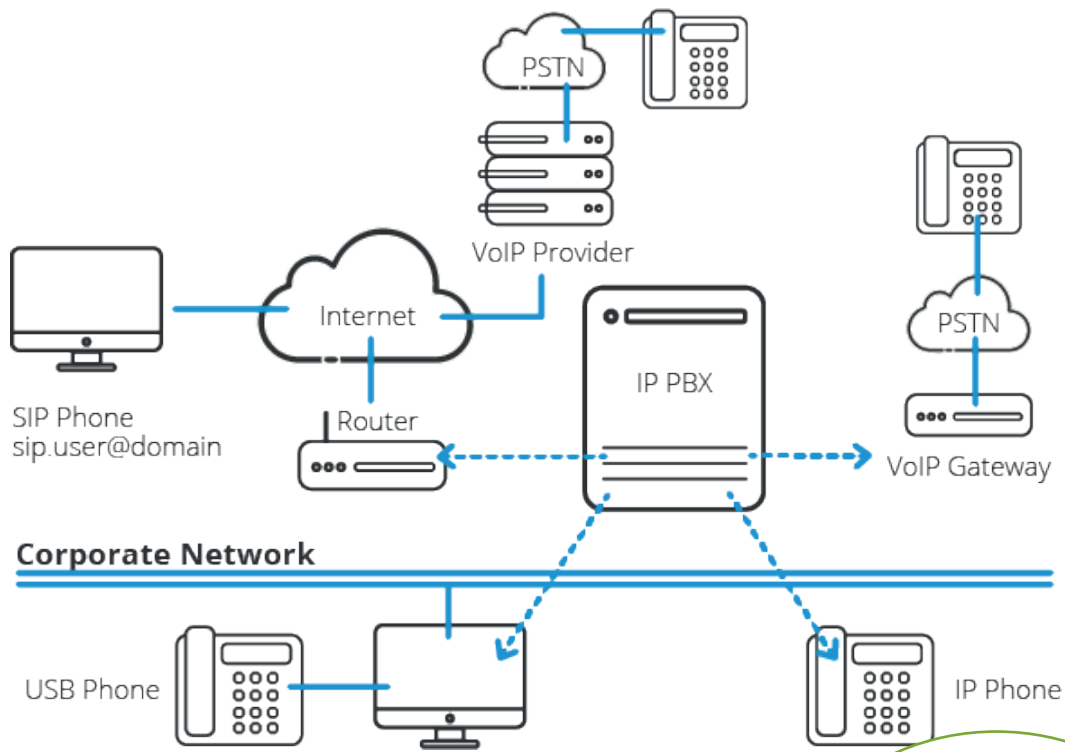

In order for your employees to work productively, you need to have a high-performing core network infrastructure. What good are your business systems and applications if your server experiences downtime due to storage issues or your data isn't safe from outside threats and viruses?

Access Control System Advantages

- Access control per user, time period and area
- Additional security is ensured by taking biometrical data (Palm Vein, Fingerprint)
- Possibility of additional protection of sensitive areas using „Advanced Access Control “
- IP based architecture for increased reliability and scalability
- Centralized monitoring and control of multiple devices and locations
- Notification of the system operation in real time
- Integration with the firefighting and other technical security systems

(b) Time Attendant

People are the most valuable asset and their time is just that much a valuable resource that fuels further growth of the organization. To avail the benefits of time-attendance policies, biometric machine for attendance must be chosen wisely. Managing people's attendance and timings is a basic, yet critical challenge for any organization. One cannot underestimate the complexity of time and attendance due to organizational structure, hierarchy and disparate operational needs.

IP PBX Telephony

Today's dynamic enterprise environment requires smarter communication solution for diversified roles of employees. Flexible device usage and round-the-clock connectivity is the need of the hour for the mobile workforce in order to have consistent in-office experience while working from home, between appointments or while on the move. Increasing competition, flexible work places and timings give rise to the need for more collaborative communication solutions for in-office and mobile workforce.

Discover a whole new world of intricate possibilities as we drive your telephony into internet Protocol's packet switched connections. Boss Telecom integrate Internet Telephony or packet switched Voice Over IP (VOIP) to transmit telephone calls over the internet. The IP Telephony Systems perform over and above the traditional connections carried by circuit-switched Public Switched Telephone Network (PSTN).

We use the Internet, to ensure your calls travel as packets of data on shared lines, avoiding the call tolls of the PSTN. We thrive to deliver the voice, or video packets in a dependable and clear flow for user satisfaction.

IP Surveillance

CCTV technology has evolved exponentially—from simple video footage monitoring, to today's intelligent systems that are capable of identifying abnormal events or behavior.

As intelligence increases in CCTV systems, so do technology applications. Surveillance technology can now be used to observe consumer behavior, to help organizations increase their revenue and profitability, and to monitor retail environments to reduce shrinkage.

The networked cameras send digital image data through an IP network, where the video feed can also be monitored on a smartphone.

Video and Audio Intercom systems

An intercom system is a two-way communication electronic device that is used for the purpose of transmitting and receiving audio and/or video transmissions. Boss Telecom is a leading audio intercom and video intercom company in Kenya. We are a supplier, dealer, installer and distributor of Intercom systems in Kenya also referred to as audio door phones or Video door phones for office, commercial property, real estate and apartment use.

There are a very wide variety of systems available as defined below:

(a) Video Intercom:

These typically have a unit that has a camera, speaker, and a push button that goes at an entrance door, and an internal monitor unit that can communicate with the entrance unit.

(b) Video Intercom:

These typically have a unit that has a camera, speaker, and a push button that goes at an entrance door, and an internal monitor unit that can communicate with the entrance unit.

Security Fencing Solutions

(a) Home Electric Fences

Electric Fence is the first line of defence against any intrusion to you home. At Boss Telecom, we have specialized team whose main job is to ensure that you home remain secure all day every day.

(b) Razor Wire Fences

Concertina Razor Wire Fences and Flat Trap Razor Wire Fences are the most affordable and maintenance free type of fences. At Boss Telecom, we supply and install razor wire fences in diameters of 450mm or 730mm or 980mm.

(c) Game/ Ranch Electric Fences

A game or wildlife electric fence is installed mostly to prevent human-wildlife conflicts, we design game fences that either keep wild animals out of your farm, hotel or lodge or keep them inside the park or conservancy area.

You deserve ultra fast internet

We present a high performance internet for your home or your company. We have more than 10 years of experience and quality in internet.
